We are in the midst of a global climate and ecological emergency unprecedented in human history. The Horniman believes that there is still an opportunity to mitigate against this crisis but that the speed and manner with which governments, organisations and individuals act is vital.

Museums are institutions of the long-term, able to place global issues in a perspective beyond that of short-term political and funding cycles. Our mission is that the Horniman connects us all with global cultures and the natural environment, encouraging us to shape a positive future for the world we all share. As the only museum in London in which nature and culture can be viewed together, in both indoor and outdoor spaces, and as a much-loved and trusted institution with close to a million visits each year, the Horniman has a moral and ethical imperative to act now.

In July 2019 we declared a climate and ecological emergency. This manifesto sets out our commitment to accelerating a step-change in how visitors engage with nature across our estate, and to making positive, practical changes to our own organisation, the local environment and people’s lives in our communities. Through our work we will encourage people to experience nature and wildlife up close and to explore the big interconnected issues of our time including climate change, species extinction, pollution and migration – and ultimately create a movement for positive environmental change.

**Our collections and visitors**

**We will transform how we use our natural history and living collections**
We will engage visitors with climate and ecological issues as part of an ambitious *Nature and Love* project which builds on everyone’s wish to ensure a sustainable future for the children of tomorrow. We will redisplay our Natural History Gallery and Nature Base to show how humans have changed the planet through their actions, and supporting people to make changes on a local and global level. The Aquarium will be re-interpreted to showcase new habitats and species focussing on their conservation and featuring our ground breaking coral research. We will also create an outdoor *Sustainable Gardening Zone* featuring a redeveloped, accessible plant nursery and programme of sustainable planting displays. A new *Nature Explorers Zone* will open up access to our historic Nature Trail and establish a nature-themed play area, encouraging environmental learning and wellbeing through exploration and play.

**We will be creative**
We will use our exhibitions, events programme and digital channels to champion environmental causes and to highlight work being done across the world to mitigate against the climate and ecological crisis.

**We will help change habits**
To encourage our visitors to reduce their impact on the natural world, our Café will offer more vegetarian and vegan menu items, and we will continue to host free water refill points in the Museum and Gardens.
We will inspire change for future generations
We will improve public awareness of the climate and ecological emergency, and offer practical ways to make positive changes to our own lives. With the support of Julie’s Bicycle Accelerator programme we will launch an Environmental Champions Club in 2021.

We will invest in environmental research
In recent years the Horniman Aquarium has been pioneering research techniques to stimulate coral sexual reproduction, and became the first institution globally to successfully induce predictable broadcast coral spawning, as well as the first successful IVF of captive corals in the UK. Through Project Coral, we will continue to support coral research facilities all over the world, opening up opportunities to examine the effects of climate change, reef restoration and support sustainable livelihoods.

Our estate

We will minimise usage and waste
We have set a target that 97% of organic food and gardens waste will be composted annually from 2020. Following the introduction of canned water and plant-based packaging in our Café, we will extend the removal of single-use plastics across all areas of the Horniman. From 2020 we will reuse 200,000 litres of Aquarium water in our Gardens each year.

We will reduce pollution
With the introduction of a Green Travel Plan in 2020 we will reduce business flying where possible and use more videoconferencing, move to fully electric or hybrid company vehicles by 2024, and encourage more visitors to use public transport. Our electricity will be from guaranteed renewable sources by 2021, and we will conduct an audit of our Greenhouse Gas emissions to scope the actions and timescale required to become Greenhouse Gas neutral by 2040.

We will embrace innovations in sustainability
We will continue our ongoing programme of upgrading to energy-efficient LED lighting, and ensure that lower environmental impact construction principles are central to our 10-year framework plan.

Our organisation

We will change the way we work
In 2020 we will appoint a Climate and Ecology Action Coordinator to develop new initiatives and involve colleagues in a Horniman-wide movement to embed our plans.

We will be a proactive partner
It is essential that we work in partnership with others to share and support. From our own staff to colleagues in the sector, and from suppliers to local community groups, we will work with a range of partners who are concerned about and engaging with the same issues as ourselves.

We will learn and improve
We will benchmark our current performance, monitor change, and report back annually on our performance in delivering a Climate and Ecology action plan, and where possible the outcomes of our engagement with visitors. We will share our experiences online, at conferences and through publications.
